Technical Skills

Android Technologies

Kotlin, Java, Jetpack Compose, Gradle, Jenkins, AirWatch, MVVM, MVI, MVP, AndroidX, DataBinding, Paging, Hilt, Dagger2, Exo Player, Google IMA SDK, Navigation Component, Coroutines, RxJava, LiveData, Fabric, Crashlytics, SonarQube, Espresso, JUnit, Picasso, Glide, Material Design, Location Services, BLE, NFC

Google

Google Jetpack, Google Play Services, Google Play Console, Google Maps, In-App Purchases, Gson, Firebase, Google IMA SDK

Web Development

Angular, PHP, Zend Framework 2, HTML, CSS, Bootstrap, Javascript, JQuery, Ajax

IDEs

Android Studio, Eclipse, Netbeans, Visual Studio

Web Services

REST, JSON, Retrofit, OkHttp3, Volley

Databases

Firestore, Room, SQLite, MySQL

Version Control Tools

GIT, GitLab, Bitbucket, SVN, TortoiseSVN

Methodologies

Agile Scrum, JIRA, Confluence, Redmine

Operating Systems

Windows, macOS, Linux

Functional Skills

Sectors: Media, Industry, Automotive, Aerospace, Services, Healthcare

Education

2014

National Engineering Degree in Applied Sciences and Technologies

2009

High School Diploma in Computer Science

Languages

French – Fluent

English - Fluent

Professional Experience

Freelance – Android Developer (Since October 2022)

BPCE (banking group)

Currently working within the Cocooning team, contributing to the development of key features for BPCE Group mobile applications (Banque Populaire, Caisse d'Épargne, etc.). My work involves enhancing user experience and implementing new functionalities aligned with the group's digital strategy

Features worked on:

- Offers (referral, retirement, etc.)
- Assistance (chatbot, internal AI)
- Youth App (theme, educational videos, ..)
- Management of mandates and direct debits

Key responsibilities:

- Application development
- Task planning for the dev team (JIRA)
- Implementation of coding standards and best practices
- Unit test implementation

Tech environment:

Android Studio, Kotlin, Compose, Koin, Gradle, MVI, MVP, DataBinding, Retrofit, Coroutines, Git, Jenkins, Figma, JIRA, Confluence

Stellantis

As part of the SDK2 team, I contributed to the development of a white-app designed to test the PIMS Core platform, which serves as the foundation for brand-specific apps within the Stellantis group. This project aimed to ensure stability, scalability, and compliance of core functionalities shared across multiple automotive brand applications.

Key responsibilities:

- Technical analysis
- Application development
- Task planning (JIRA)
- Implementation of coding standards and best practices

Tech environment:

Android Studio, Kotlin, Gradle, MVVM, Navigation Component, DataBinding, Flow, Retrofit, Gson, Room, Coroutines, JIRA, Wiki, Git

Bouygues Telecom – BTV App

Worked as part of a 5-member Android development team on the BTV application for Bouygues Telecom. The app, available on both smartphones and tablets, delivers a complete multimedia experience including live TV streaming, replay services, program recording, radio stations, and podcast playback.

Key responsibilities:

- Technical analysis
- App development
- Task planning (JIRA)
- Implementation of standards and best practices

Tech environment:

Android Studio, Kotlin, Gradle, Clean Architecture, MVVM, DataBinding, Flow, Retrofit, Exo Player, Google IMA SDK, Gson, Room, Coroutines, JIRA, Wiki, Git

05/2020 – 08/2022 – OCS - Orange

Within the OPTV mobile team, I contributed to the development of the OCS streaming application, dedicated to delivering movies, series, and documentaries across multiple platforms. I was specifically involved in implementing and integrating authentication services for various telecom operators (Bouygues, Swisscom, Free)., and worked on the “OCS Youth” app to tailor access and experience for younger audiences.

Key responsibilities:

- Technical analysis
- App development
- Task planning (JIRA)
- Implementation of standards and best practices
- Delivery of test versions (App Distribution)

Tech environment:

Android Studio, Kotlin, Gradle, Clean Architecture, MVVM, Navigation Component, DataBinding, Retrofit, Gson, Room, Coroutines, Agile Scrum, JIRA, Wiki, Git

07/2020 – 02/2022 – La Poste

As part of a 6-developer team at La Poste, I contributed to the development of three Android applications specifically designed for postal workers:

- A digital badge application to replace traditional NFC access cards
- An authorization loader for transferring access credentials securely to employee badges
- A device compatibility tool to verify whether hardware met operational and technical requirements

These applications were developed to improve operational efficiency, strengthen access control, and support the digital transformation of field operations.

Key responsibilities :

- Technical analysis
- App development
- Task planning (JIRA or Redmine)
- Implementation of development standards and best practices
- Test delivery and updates (where applicable)

Tech environment :

Android Studio, Kotlin, Gradle, MVVM, Navigation Component, DataBinding, Retrofit, Gson, Room, Coroutines, NFC, Agile Scrum, JIRA, Wiki, ICDC, Git, GitLab, Jenkins

07/2017 – 11/2019 – Bitbase Group

Bitbase Group (Intern)

Bitbase Group is a German software publisher. I joined the mobile team (composed of four Android developers) to work on the mobile version of their ERP system, "Kameon." We developed five functional modules tailored to meet the needs of enterprise resource management on mobile platforms.

- Timer App: Application for work time management
- Reporting: Use charts to visualize data (Telerik Reporting)
- Address Book: Synchronize contacts from the web ERP and the mobile application (SQLite)
- Experimental Report: Automation of experiments conducted within their factories.
- BCR (Business Card Reader): Development of the BCR module using the Google Mobile Vision API (OCR).

Key responsibilities:

- Technical analysis
- App development
- Task planning (JIRA or Redmine)
- Implementation of development standards and best practices
- Test delivery and updates (where applicable)

Tech environment:

Android Studio, Java, MVVM, Firebase Push Notification, SQLite, Picasso, Google Mobile Vision, QR Code Reader, Fingerprint & Facial Authentication, Agile Scrum, JIRA, Confluence, SVN, TestFairy

SG Stern Mercedes

Alongside ERP development at Bitbase Group, we also worked on external client projects. One of them was SG Stern, an application developed for Mercedes employees. The app allows users to browse and manage sports club activities and view events or sessions they

are registered for. It was designed to promote employee well-being and engagement through easy access to company-sponsored sports programs

Link: <https://play.google.com/store/apps/details?id=com.bitbasegroup.sgstern>

Key responsibilities:

- Technical analysis
- App development
- Task planning (JIRA or Redmine)
- Implementation of development standards and best practices
- Test delivery and updates (where applicable)

Tech environment:

Android Studio, Kotlin, MVVM, Navigation, DataBinding, Retrofit, Gson, Picasso, Agile Scrum, JIRA, Confluence, SVN, Espresso, TestFairy

Medcon Team

For a group of German doctors (Medcon Team), I developed an Android application for emergency case management. The app was designed to help medical teams quickly record, track, and respond to emergency situations, providing fast access to essential patient information and improving coordination during critical interventions

Link: <https://play.google.com/store/apps/details?id=com.bitbasegroup.sgstern>

Key responsibilities:

- Technical analysis
- App development
- Task planning (JIRA or Redmine)
- Implementation of development standards and best practices
- Test delivery and updates (where applicable)

Tech environment:

Android Studio, Kotlin, MVVM, DataBinding, Picasso, Retrofit, JSON, Gson, Location Services, Maps Services, Agile Scrum, JIRA, Confluence, SVN

06/2016 – 03/2017 – Synchronecs

As part of the Unisas project, I developed a module to control a smart camera capable of facial recognition and live streaming.

The module allowed users to remotely operate the camera, manage its orientation, and process real-time video feeds while detecting and identifying faces, laying the groundwork for intelligent surveillance and interactive monitoring systems.

Key responsibilities:

- Technical analysis
- App development
- Task planning (JIRA or Redmine)
- Implementation of development standards and best practices
- Test delivery and updates (where applicable)

Tech environment:

Android Studio, Java, WebSocket (Streaming), PHP, JavaScript

10/2015 – 06/2016 – AvMap (Tuntech)

For AvMap Group, as part of the “Engibox” project, I developed both web and mobile applications.

Engibox is an embedded system installed in aircrafts that interfaces with onboard sensors to collect and store data such as engine RPM, oil level, oil temperature, and GPS locations.

The **mobile application** connects to the Engibox device, retrieves a binary file containing all flight and engine data, and uploads it to a central server. The **web application** then processes and decompresses this binary file to generate readable, visual charts for analysis.

Application links:

- [Android App on Google Play](#)
- [Web Platform](#)

Key responsibilities:

- Technical analysis
- App development
- Task planning (JIRA or Redmine)
- Implementation of development standards and best practices
- Test delivery and updates (where applicable)

Tech environment:

Android Studio, Java, Bluetooth Low Energy, Agile Scrum, Redmine, SVN

02/2015 – 09/2015 – Permicible (Zetacos)

Permicible is a driving school. As part of the Permicible project, I developed an Android application aimed at automating the company’s internal services and operations.

The app was designed to digitize key workflows such as student management, scheduling, and payment processing, helping the organization increase efficiency and modernize its customer experience.

Key responsibilities:

- Technical analysis
- App development
- Task planning (JIRA or Redmine)
- Implementation of development standards and best practices
- Test delivery and updates (where applicable)

Tech environment:

Android Studio, Java, PayPal SDK
